Key ClipMaster Professional Image Library

For Windows, DOS & Macintosh

Introduction

Welcome to **Key ClipMaster Professional** Image Library for IBM PC compatibles and the Macintosh. You now own a Clip Art collection of 5001 masterpiece images of the highest quality available from Metro Creative Graphics. The wide range and graphic industry standard of these images enable you to produce memos, advertisements, brochures, ... everything you write with a highly professional appearance, sourced from an endless variety of subject categories.

Installation

Together with this manual is the CD-ROM which holds the art images in either IBM, or Macintosh format. The images have been defined using the uncompressed TIFF standard. Place the CD-ROM for the system you are using into your CD drive and the images are instantly available for use by hundreds of applications in either the IBM PC (DOS and Windows), or Macintosh environments. You now have the options of either saving space by using the masterpiece images directly from the CD-ROM, or of copying the images onto your hard drive for quicker reference.

Using Clip Art

The storage capacity of CD-ROM allows for incredibly high volumes of images to be held on one disk. This capability broadens the range of images which are available. The best method of using this visual database is to copy onto your hard disk only those images which you are actually going to use. You can leave the remaining images on the CD-ROM and reference them directly from any application, but, you must remember to have the same CD in the drive whenever you access that program subsequently.

System Requirements

CD-ROM drive. Microsoft CD-ROM Extensions version 2.10 or higher.

DOS Environment - DOS 3.0 or higher, 286/386/486 PC and compatible computers with 640K RAM, 2 MB of free memory and a Hard Drive.

WINDOWS Environment - Windows 3.1. or higher, 286/386/486 PC and compatible computers. 4 MB of free memory. Windows supported video adapters, monitors and printer drivers. Mouse recommended.

MAC Environment - Macintosh Classic, SE, IIcx and 2MB of free memory.

Utilities

Together with the masterpiece art images are three utilities which have been included in the package to simplify the task of previewing the images you want to import into your work. These utilities are:

- DOS Platform ***Image Gallery***
- Windows Platform ***PixFolio/KeyFolio***
- Macintosh Platform ***Image Catalog***

To use the utilities copy them from your CD-ROM onto the hard disk drive.

NOTE: CD-ROM is a Read-Only Memory System, therefore catalog information definitions will have to be set up on the hard disk.

The Manuals for the utilities are incorporated into the programs. Therefore depending on your particular system, you have the ability to print the relevant manual. This option will give you comprehensive feature details on the selected utility.

Technical Specifications for the Viewing Utilities

Windows

PC compatible 286, 386, or 486 running Windows 3.1 or higher. 4MB RAM required (additional RAM Recommended). Windows-supported video display adapter, monitor and printer required. Mouse recommended.

DOS

PC compatible running DOS 3.0 or higher. 640K RAM memory required. Expanded memory recommended. VGA adapter and monitor required. Mouse required. HP LaserJet compatible laser printer or Epson compatible dot matrix printer required to print images.

Mac

Macintosh Classic, SE, IIsi, IIcx, etc. with a minimum of 4MB of memory (additional RAM recommended) and hard drive. System 7 and Color Quick Draw™ required. Quick Time™ recommended. A laser printer is required in order to print the images.

Image Categories

The Clip Art collection is divided into eighteen different categories each defined to group common featured images. The names and the number of images per category are listed as follows:

A	ALPHABETS	216
B	ANIMALS	53
C	BUSINESS	304
D	CARTOONS	106
E	COMPUTER	30
F	EXERCISE	19
G	FASHION	356

N	MISCELLANEOUS	307
O	PEOPLE	217
P	RELIGION	95
Q	RETAIL ATTENTION GETTERS	649
R	SPORTS/RECREATION	439

WELCOME TO KEY CLIPMASTER PROFESSIONAL !

Utility for the Windows Platform

NOTE: A comprehensive Manual is included in the program. *KeyFolio* is referred to as *PixFolio* in this text. From the File Manager double-click on the README.WRI file located in the *KeyFolio* sub-directory.

PixFolio

Introduction

PixFolio is designed to assist the user in managing a collection of graphic images so that they may be readily retrieved when desired. *PixFolio* has the ability to read and convert a variety of different graphic formats supported by many popular programs.

With graphic images taking up vast amounts of valuable and expensive disk space, it becomes necessary to keep them on removable disk media. *PixFolio* is able to keep track of these "off-line" copies; they are referred to as "backup" copies even though in many cases, the disk copy may be the only storage location. Therefore, when the user desires to view one of these copies, it is easy to locate the right image.

PixFolio possesses a number of editing tools that can be used to manipulate images in various ways. Its main purpose remains that of cataloging and keeping track of images.

PixFolio supports the Windows Clipboard so that graphic formats not directly supported by *PixFolio* can be imported via the clipboard. *PixFolio* can export an image via the clipboard to other applications.

Installation and Usage

To install *PixFolio* you will need to create a directory on your hard drive and install *PixFolio* into this directory in order for this utility to work. To achieve this copy all the files from the directory called *PixFolio* on the CD-ROM into the *PixFolio* directory on your hard disk.

Use File Manager in Windows to create a directory on your hard drive called *PixFolio*, then select and drag all of the files from the *PixFolio* directory on your CD-ROM into the new *PixFolio* directory on your hard drive.

To include *PixFolio* in your program manager go to the File Menu, select New, then Program Item. Now follow the prompts you are given to identify *PixFolio*. Refer to your Windows Manual for further assistance.

Printing Images

An image or a selected portion of it may be printed via the File Print command. To print just a portion of an image, use the mouse to draw a marquee around the portion you wish to print. Then select the File Print option.

The **Options** dialog box allows you to scale the picture to the desired size. To aid in selecting the correct size, the size of the image can be expressed as a percentage of the original or in pixels. Also, the resulting size in inches or centimeters is displayed. *PixFolio* assumes that the image is comprised of square pixels and automatically scales the image accordingly if the printer horizontal and vertical resolutions are not the same to avoid distortion.

Printing Catalog Entries

There are three ways to print a catalog entry:

❶ Select Print Catalog from the Catalog Browse dialog box. Only one entry, the currently selected item, can be printed at a time.

❷ Select the Catalog Print command from the Catalog Menu. This will print all of the selected entries in the current catalog. The Catalog Browse - search commands can be used prior to this to narrow the scope of the request to those catalog entries meeting requested criteria. Up to four catalog items will be printed per page.

❸ From the pop-up menu in Thumbnail View select the Process Thumbnail command, then select the print option. This command will print only "marked" entries. It is the best way of printing specific items. Up to four items will be printed per page.

NOTE: There are two catalog print formats supported by *PixFolio*. The default format will allow two to four entries to be printed per page. This format will print all keywords, the title, description and path information for the entry. The Alternate print format will print up to twenty thumbnails per page. This option can be selected via the File - Select Printer function.

Prior to selecting any of the above options, a printer should be selected and the desired typeface and paper size determined.

Technical Requirements

PixFolio can operate on any 286/386/486 PC, running Windows 3.1 or higher and 4MB of memory. *PixFolio* will support any printer supported by Windows 3.1.

NOTE: If you plan to view other images which are 256 colors, you will have to install the required card and driver.

Utility for the Macintosh

NOTE: A comprehensive Manual is included in the program.
For your convenience the catalogs have already been created by SoftKey, and are stored in the individual category directory.

Image Catalog

Introduction

Image Catalog is an image cataloging program for the Macintosh. *Image Catalog* does for computer images what a contact sheet does for photography - it shows a catalog of dozens of images arranged on the same page. This utility will take a collection of image files and organize them as high-quality reduced image cells in a single window. For example on a 13 inch color monitor a single *Image Catalog* screen will display thirty two pictures, nicely reduced and in gray scale so they are recognizable.

Windows

There are three types of views: the **Image** window, the **Catalog** window and the **Test Listing** window. These three windows make full use of all the colors available; this means that when a *Image Catalog* window is open it will have priority over the available colors, frequently making the desktop colors or colors in other windows appear wrong.

Image Window

An **Image** window is a standard scrollable view of an image. An image window is created when an image file is opened from the main menu or when a cell in a catalog window is opened.

The contents of an image window may be copied to the clipboard.

Catalog Window

A **Catalog** window is divided into cells where each cell contains a reduced view of a larger image. This multi-cell window acts as a catalog for images. A typical window will show thirty to forty images at the same time. By default *Image Catalog* uses a high quality averaging technique to reduce the images, which maintains most of the image detail. For many low-resolution images, this technique produces reductions superior in appearance to the original. The title of a catalog window is always bracketed by '0' characters, to distinguish it from image windows.

- Each cell is associated with a file on disk. Each cell is divided into two parts: the top part contains the reduced image; the bottom part shows the name of the disk file and related image information.
- Double-clicking in a cell will open the disk file associated with the cell. If the cell specifies "Open with Finder", then the Finder will be used to launch the disk file as though you had double-clicked on it from the Finder.
- Double-clicking on the title of a frame will open the title-edit dialog.
- Swap cells by dragging one onto the other.
- Insert a cell by dragging it onto the grid line, or by Shift-dragging it to the cell you wish to place it after.
- Adjust the position of a cell in a row by dragging it to a new position (variable spacing only).
- A cell can be removed by single-clicking on it, then hitting the delete-key or selecting Clear from the Edit Menu.

- A **Catalog** can be saved onto your Hard Drive in either compressed or uncompressed format. Compressing a **Catalog** saves disk space, but it takes longer to save and open. Compression is set from the Preferences dialog of the Edit menu.

NOTE: Quick Time must be installed to use compression.

Text Listing Window

A **Text Listing** window is an alternate way to view catalog windows. A catalog window must currently be open before the List as text command may be issued. The listing has one line per cell that shows the attributes of the file associated with the cell.

- Double-clicking on a line of text opens the file, exactly the same as double-clicking on the cell in the catalog window.
- Copying a Text Listing using the Edit menu Copy command will copy all the text in the Text Listing to the clipboard. By default the text is copied separated by spaces. Hold down the Shift-key to copy the text as tab-delimited fields.

Quick Start

- Drag and drop some image files into Image Catalog. Sit back and watch the catalog build itself.
- Double-clicking on a cell opens the corresponding file. Cells can be set to either display the image locally or launch it with a different application.

Printing

To print Catalog windows, select Print from the File Menu. Printing only works on laser printers.

For greater printing flexibility, almost any other graphic program can be used to print catalogs since *Image Catalog* saves files in the standard 'PICT' format.

Technical Requirements

- *Image Catalog* knows MacPaint, PICT, JPEG, JFIF, TIFF and GIF formats.
- Requires Color Quick Draw and System 7.
- You must have at least 4MB of memory.
- Quick Time recommended.
- A laser printer is required for printing.

Utility for DOS

NOTE: A comprehensive Manual is included as part of the program.
For your convenience the catalogs have already been created by SoftKey, and are stored in the individual category directories.

NOTE: Not all of the functions shown on the menu's are available in the CD-ROM version of this program. The Help function explains the available functions.

Image Gallery

Introduction

Image Gallery is a tool to help you maintain a large collection of bitmapped image files through the use of a visual database. You will be able to search through an *Image Gallery* database (called a gallery), either visually (by browsing through the images), or by key words. Each entry in a gallery is a small-size picture (called a thumbnail) of the original image. Because of their size, thumbnail images have a much lower resolution than the original images they depict.

Installing *Image Gallery*

Installing *Image Gallery* is a relatively simple task that involves moving several files from the CD-ROM onto your hard drive. *Image Gallery* is contained in a subdirectory on the CD-ROM called "GALLERY". To copy the files, perform the following steps.

❶ From the C:\ prompt, enter this command:

MD \GALLERY ↵

❷ When the prompt returns, enter the command:

COPY X:\GALLERY*.* C:\GALLERY ↵

where "X" is the drive letter for your CD-ROM (in most cases it will be "D" or "E"). If the hard drive

letter is different than the one used above, such as drive "D", then change it accordingly.

❸ Now go into the *Image Gallery* subdirectory by entering this command:

CD \GALLERY

You are now ready to use *Image Gallery*.

Running *Image Gallery*

To start *Image Gallery*, make sure you are in the GALLERY subdirectory and enter this command:

GAL-LITE

The screen will turn grey, a copyright notice will appear briefly and *Image Gallery* will be set to go. To open a gallery, use the mouse to point to the "File" menu and press the left button. When the menu appears, place the pointer over "Open" and press the left mouse button again. To get the general idea of what a gallery looks like, select EXAMPLE.GAL and then select the "OK" button.

This will open the EXAMPLE.GAL gallery file. A white box will appear in the centre of the screen and twenty small pictures will appear in it.

Go into the "CLIPART" subdirectory of the CD-ROM and look for the ".GAL" files in each of the category subdirectories. These gallery files will show you what the clipart images look like. You can take a closer look at any entry by placing the pointer over the file and then pressing the right mouse button. This will display the file using the full screen, and you can use the arrow keys to pan around the file.

NOTE: The full screen display will not work for the EXAMPLE.GAL file.

Press the right mouse button or the Escape button to return to the gallery screen.

Printing Images

The Print function will print all or part of your current gallery to your choice of printers. Each entry will be printed as a thumbnail image, the entry details and your description of the image's contents. Select an entry by placing the pointer over it and then press the left mouse button.

You can also print selected entries...this option will only be available if you have one or more entries selected when you invoke the Print function. Selecting multiple images is done by holding down the Shift key while pressing the left mouse button when the pointer is over the desired image.

Pressing Alt-P will also activate the print function.

If you want to print the gallery on a dot matrix printer, you'll need to use a program called GALINSTL to select it.

Configuring *Image Gallery*

Making permanent changes to the modifiable features of *Image Gallery* involves using the configuration program, GALINSTL. A separate program was used in order to keep *Image Gallery* as small as possible, thereby making more memory available for the graphic images. The GALINSTL program will actually modify the GAL-LITE.EXE file, which must be in the same directory as GALINSTL and must be so named. When you run GALINSTL, a menu will appear which will let you modify the runtime settings, add or change your screen driver and add or change your dot matrix printer driver.

NOTE: The printer drivers are contained in a file called GAL.RES. This file must be in the same directory as GALINSTL. If the file is missing, the corresponding options in the main screen of GALINSTL will not be available.

Category A
Alphabets

The 's of Clip Art are presented to you in six alphanumeric sets.

The alphabet selections offered in the Key ClipMaster Professional Gallery provide the user with an option to be more creative and artistic with the written word. Everything you need is here from A to Z and it's as easy as ...

You could put together your next notice with just plain words on a page, or communicate the spirit of the message with a tasteful border or accent that will deliver home to the recipient the spirit and tone of your message.

Notices, Greetings, Bulletins, Memoranda, Announcements and Invitations can be brought to life with a package that can lift the words off the page.

Health Care

AN APPLE A DAY KEEPS THE DOCTOR AWAY.

Health care spending and changes within the health care system are of importance to everyone. As a representative of a health industry organisation making a presentation, a market oriented health economist writing on the access of people to quality affordable health care or a physician in a nursing home reviewing the topic of the aging population let Key ClipMaster assist you in this task.

Holidays/Special Events

Make next year's social calendar one to remember! Celebrate the holiday dates of the year such as Lincoln's Birthday, Martin Luther King Jr. Day and Washington's Birthday with a personal greeting card. Now you can create your own calendar of events every month of the year. This special event collection offers a host of ideas for birthday wishes, anniversary notes, party invitations, Valentines, Easter and Christmas greetings. At your next St. Patrick's Day party offer them Shamrock Specials.

In line with SoftKey's objective of improving the quality of the product support service provided to you, our customer, a 900 product support line will soon be implemented. Additional details will be provided in the near future. Thank you for purchasing SoftKey software.

5,001 Images from the World's Largest Clip Art Collection

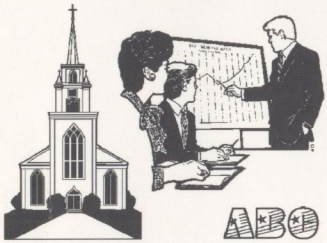
Now Communicate With More Impact

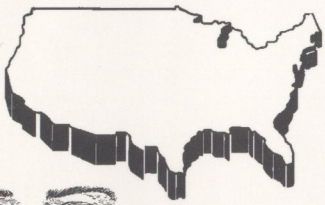
IT'S CLASSIC AND it's still true – a picture is worth a thousand words. Professionals know this and use every opportunity to integrate visuals with text. That's why they turn to Metro and now so can you!

But variety is the spice of life so you need thousands of images to choose from. That's why Key ClipMaster Pro gives you so many Metro illustrations created in multiple styles covering so many topics. You'll use it every day in memos, newsletters, reports, invitations, brochures, catalogs, advertisements,... Everything you create!

One CD-ROM with 5001 Masterpieces

Thanks to the incredible storage capacity of CD-ROM technology, Key ClipMaster Professional puts thousands of images at your fingertips, ready to use. You get the best of classic publishing standards. Each image is original art created using cross hatch, stipple, mortise wood cut, straight line or silhouette techniques. This guarantees the art is reproduced with all the clarity and brilliance the illustrator intended. Key ClipMaster Pro also includes a viewing program that allows you to preview each image before you import it into your work.





Key ClipMaster Pro is an essential visual database you'll integrate into your word processor, desktop publisher, paint or draw application. A great companion for hundreds of Mac applications.

SYSTEM REQUIREMENTS:

All images in TIFF format. Any Macintosh compatible CD-ROM drive. Macintosh Classic, SE, IIcx and 2MB of free memory.
